CFIP Price List

Commodity Prices

Prices in the *CFIP Price List* are provincial prices collected from Statistics Canada, Agriculture and Agri-Food Canada (AAFC), the Canadian Wheat Board (CWB), provincial agriculture departments, and commodity organizations. These prices represent the year-end price for each commodity, averaged across the province.

The FMVs provided on the *CFIP Price List* should be used unless you feel the published FMVs are unreasonable for your operation. In these cases, you may use a FMV based on receipts for commodity sales or purchases made in *your name* occurring within 30 days of your fiscal year-end. To be accepted, copies must be submitted with the application.

Where the *CFIP Price List* does not provide a FMV for a specific commodity, you must provide a FMV for your commodity. Although it is not mandatory for an applicant to provide documentation supporting prices submitted for unpublished commodities, doing so will assist CFIP in determining whether the FMV you have submitted is reasonable for your farming operation. Supporting documentation can take the form of:

- receipts from sales or purchases of the commodity;
- price information from appropriate commodity marketing agencies.

To be considered, supporting documentation must be submitted with your application.

Note: CFIP will value commodities on a grade and/or protein level basis if a) it was produced by a certified seed grower, b) it is a sample grade, or c) it is valued by grade/protein level on the *CFIP Price List*.

In all cases, CFIP reserves the right to determine whether submitted FMVs are reasonable for your farm.

Note: If you have a non-calendar fiscal year-end, you can contact CFIP to obtain a monthly price list.

Crop Conversions

CFIP prices crops by weight (\$/t). If your records are based on volume (\$/bushel), it will be necessary to convert your volume measurements to weight measurements to apply the CFIP prices for inventory valuation. To calculate the weight measurement of your crop, divide the volume measurement by the standard conversion factor. Refer to the example below.

Crop / Grade	Starting Inventory (volume - bushels)	Standard Conversion (bushels per tonnes)	Starting Inventory (weight - tonnes)
No. 2 CWRS (13.0)	10,000	36.744	272.15
Oats	10,000	64.842	154.22
Canola	10,000	44.092	226.80

Note: A conversion calculator is available on the CFIP website at www.agr.gc.ca/cfip (English) or www.agr.gc.ca/pcra (French).
